Results Workshop 5:

Enhancing Research Competences

**The Structure of Medical Education in
Europe**

Implementing Bologna –

On the way to a European success story?

Workshop 5: Enhancing Research Competences

- All medical students should have opportunity for research experience
- Research provides a perfect tool for the development of critical judgment of scientific information as well as clinical reasoning
- Research may be basic, clinical or population-based
- The students' motivation for research in the course of undergraduate study is essential
- International medical student conferences, summer schools, elective courses etc. contribute to the development of educational and research climate in future
- During the research work students should be supervised by highly qualified mentor
- There should be a structured period of time devoted to research during the specialty training programme
